SLOW DOUGH PIZZA CO. · STAFF GUIDE

Updating the website yourself

Change the **Today's Dough** banner, the **Daily Menu**, **Blog posts** and **Store hours** in about five minutes. Nothing goes live until the owner approves it, so you cannot break the site — relax and edit.

STEP 1

Open the staff editor

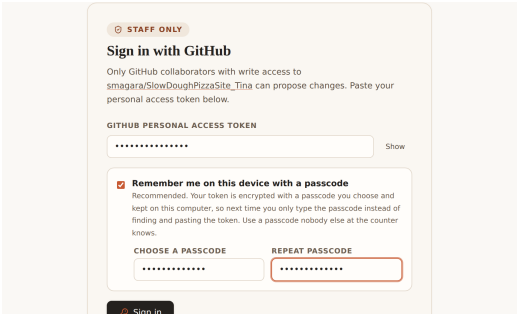

Scroll to the very bottom of the website and move your mouse to the **bottom-right corner of the footer**, just after "All dough aged with patience." A small ✎ **Staff** link appears — click it.

Shortcut: type the address directly — `smagara.github.io/SlowDoughPizzaSite_Tina/#/edit`

Tip: bookmark the shortcut on the shop laptop.

STEP 2

Sign in once — then just your passcode

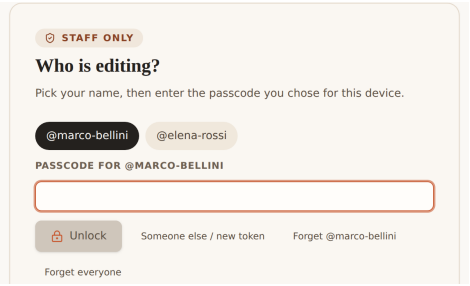

First time: paste your personal GitHub token, choose a **passcode** (6+ characters, typed twice) and press **Sign in**. The editor checks that you are a collaborator of the shop's repository — if you see "not a collaborator with write access", ask the owner to add you.

Every time after that the screen just asks for your passcode. **Shared counter laptop?** That is fine — everyone signs in once with their own token and passcode, and afterwards the screen asks **"Who is editing?"**: tap your name, type your passcode. Five wrong passcodes erase your remembered token (nobody else's). The editor locks itself after 30 minutes without activity, and **Sign out** locks it at once — do this when you step away.

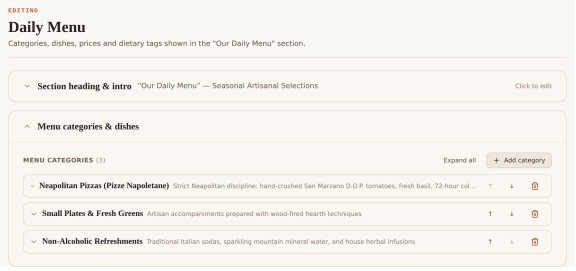

Need a token? See the "Getting your GitHub token" box at the end of this guide. Untick "Remember me" on a computer you do not trust.

Return visit on a shared laptop: pick your name, then your passcode. **Someone else / new token** adds a new person or replaces an expired token; **Forget @name** removes one person.

STEP 3

Pick a section and make your changes

Use the tabs: **Dough Announcement**, **Daily Menu**, **Blog Posts**, **Store Hours**. Sections and dishes start folded to one line — **click a row to open it** (or **Expand all**). Type straight into the fields.

- **Announcement** — headline + detail; untick "Show the announcement banner" to hide it.
- **Menu** — click a category, then a dish, to change price, description, tags or the Vegetarian/Vegan ticks. Use **+ Add item**, the arrows to reorder, and the bin to remove.
- **Blog Posts** — **New post** → title → **Create post**. New posts show on the site once saved/approved; tick **Draft** only to hide one.
- **Undo changes** (top right) resets a section; **Discard** (bottom bar) resets everything.

STEP 4

Fix anything shown in red

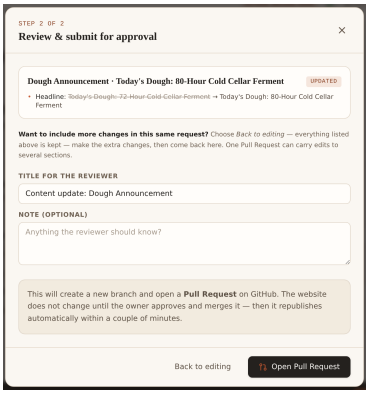

The editor checks your text as you type. Symbols such as **< >**, web code, very long text or a negative price are flagged with a red message under the field, and the bottom bar shows "**1 issue to fix**". The submit button stays grey until everything is fixed.

Normal punctuation — apostrophes, &, °, –, $ — is fine.

STEP 5

Review & submit for approval — one request or several?

Click **Review & submit for approval** in the bottom bar. You will see a plain-English list of exactly what changed (e.g. "Price (USD): 19 → 21"). Add a short note for the owner if useful, then press **Open Pull Request**.

Several edits in one request: press **Back to editing** instead — everything in the list is kept — change something else, then review again. One request can carry the banner, the menu and the hours together.

\+ one approval, goes live together, less noise for the owner – if the owner rejects one item nothing in the batch goes live until it is fixed; unsent edits are lost if the tab closes or the editor locks.

Rule of thumb: batch what belongs together (tonight's menu); send a blog post and a price correction separately.

STEP 6

Done — the owner approves and the site updates itself

A green box confirms "**Pull Request #… opened**" with a link. The owner gets a review request on GitHub; once they approve and merge, the website rebuilds and republishes automatically — usually within about two minutes. You can close the tab.

Want to change more? Just keep editing — each submission becomes its own request.

Good to know

- **Nothing is live until approved.** Your submission is a request; the owner reviews it first.
- **Red means fix me.** A row or section with a problem stays open until it is fixed.
- **Two people, one laptop?** Each has their own passcode; pick your name at the passcode screen and sign out when you hand over.
- **Posts are visible by default.** Tick **Draft** on a post to keep it hidden while you work on it; a yellow notice reminds you it is hidden.
- If it says a file "was changed on main after you loaded it", someone else edited the same thing: reload and redo your change.
- Two people can work at once; each gets their own request.
- Questions? Ask the owner, or open the request link to comment on GitHub.

Getting your GitHub token (one time)

1. Sign in to github.com → click your photo → **Settings**.
2. **Developer settings** → **Personal access tokens** → **Fine-grained tokens** → **Generate new token**.
3. Name it "Slow Dough editor", expiry 90 days.
4. Repository access: **Only select repositories** → **SlowDoughPizzaSite_Tina**.
5. Permissions: **Contents: Read and write**, **Pull requests: Read and write**.
6. Generate, copy it, paste it into the editor. Repeat when it expires.

Creating a new blog post: Blog Posts → **New post** → type the title → **Create post**. Fill in Author, Excerpt and at least one paragraph, then submit like any other change — it appears on the site once saved (local) or approved (live site). If a post shows a **Draft · hidden from website** badge, it is hidden on purpose: open it and press **Publish this post**.

For developers: the editor also runs in **local edit mode** during `npm run dev` and saves straight to the content files; the full Tina admin is at /admin/index.html. See the Technical Design Document for details.
